LEGACY FORMFLEX

TDS01-100

a positive insurance preserving weather tightness against ongoing substrate cracking problems. TYPICAL USES Provides a complete system that provides penetration and crack-bridging encapsulation for ACM. Also used a smooth or textured finish with suitable equipment. ENVIRONMENT Exterior PERFORMANCE Excellent tensile strength, true stretch, and recovery for permanent crack bridging without wrinkling or rupture. Total and permanent resistance to wind driven rain. Water vapour permeable, provides excellent ultraviolet and weather durability. In film biocidal protection to restrict degradative mould and fungus growth. Has a "B' value minimum of 6, which allows for a new crack to form of width up to 6 times the dry film thickness of the coating without rupture of the coating itself - or up to 1.5mm wide at specified dry film build. Self. Elongation @207C 300%. Minimum dry film build 250µm Value 6 Progressive bridging 1.5mm @ 250µm Tensile Strength for 3. MPa Water Vapour Permeability: Equivalent Air Layer 5d +0.5 metres (max. 2 metres required) Carbon Dioxide Diffusion Equivalent Air Layer 5d +0.5 metres (max. 2 metres required) Carbon Dioxide Diffusion Equivalent Air Layer 5d +0.5 metres (max. 2 metres required) Carbon Dioxide Diffusion Equivalent Air Layer 5d +0.5 metres (max. 2 metres required) Carbon Dioxide Diffusion Equivalent Air Layer 5d +0.5 metres (max. 2 metres required) Carbon Dioxide Diffusion Equivalent Air Layer 5d +0.5 metres (max. 2 metres required) Carbon Dioxide Diffus	DESCRIPTION	
alternative to removal of the health hazards associated with exposure to asbesto providing a positive in abesto accopsolution, concrete repair, and protection systems. It is suited to critical situations where inheren high elasticity and excellent crack-bridging properties providing a positive insurance preserving weather tightness against ongoing substrate crackbridging properties providing a membrane where full recoat-ability and ease of maintenance and repair is required. Can be applied to a smooth or texture dinish with suitable equipment. ENVIRONMENT Exterior PERFORMANCE Excellent tensile strength, true stretch, and recovery for permanent crack bridging without wrinkling or rupture. Total and permanent resistance to wind driven rain. Water vapour permeable, provides excellent ultraviolet and weather durability. In film biocidal protection to restrict degradative mould and fungus growth. Has a "B" value minimum of 6, which allows for a new crack to form of width up to 6 times the dry film thickness of the coating itthout rupture of the coating itself - or up to 1.5mm wide at specified dry film build. Elongation @20°C 300%. Minimum dry film build 250ym B Value 6 Progressive bridging 1.5mm @ 250ym Tensile Strength 0.3 MPa Water Vapour Premeability: Equivalent Air Layer 5d <0.5 metres (max. 2 metres required) Carbon Dioxide Diffusion Equivalent Air Layer 5d <0.5 metres (max. 2 metres required) Carbon Dioxide Diffusion Equivalent Air Layer 5d <0.5 metres (max. 2 metres required) Carbon Dioxide Diffusion Equivalent Air Layer 5d <0.5 metres (max. 2 metres required)		As an Asbestos Encapsulation Membrane its high solids, allows the encapsulation of friable Asbestos
particularly for use in abstote encapsulation, concrete repair, and protection systems. it is soluted to ritual stuations where inheren high enclassition, and accelebratic and accelebration and accelebration and accelebration for ACM. Also used a smooth or textured finish with suitable equipment. ENVIRONMENT Exterior PERFORMANCE Excellent tensile strength, true stretch, and recovery for permanent crack bridging without wrinkling or rupture. Total and permanent resistance to wind drive rain. Water vapour permeable, provides excellent ultraviolet and weather durability. In film biocidal protection to restrict degradative mould and fungus growth. Has a "8" value minimum of 5, which allows for a new crack to form of width up to 5 times the dry film thickness of the coating ittichur urpture of the coating itself - or up to 1.5mm wide at specified dry film build. Sequence bridging 1.5mm @ 250µm Forgressive bridging 1.5mm @ 250µm Toroit String for a difference in the substrate. Water vapour permeable, provides excellent ultraviolet and drying is likely to fail below 100c. Dryit time will be impeded when humidity is over 80%. Water vapour Permeability: Equivalent Air Layer 5d <0.5 metres (max. 2 metres required) Carbon Dixide Diffusion Equivalent Air Layer 5d <0.5 metres (max. 2 metres required) Carbon Dixide Diffusion Equivalent Air Layer 5d <0.5 metres (max. 2 metres required) Carbon Dixide Diffusion Equivalent Air Layer 5d <0.5 metres (max. 2 metres required) Carbon Dixide Diffusion Equivalent Air Layer 5d <0.5 metres (max		
it is suited to critical situations where inheren high elasticity and excellent cracking problems. SPREAD RATE	First Coat: 4 - m²/litre/coat Second Coat: 4 - m²/litre/coat Practical spreading rates will vary depending on such factors as application method, ambient conditions and surface porosity and roughness.
PRODUCT CODES	01-100.15 01-100.20
SURFACE PREPARATION	Asbestos-Aged Unpainted Good Spray with TRUEPREP GREEN KILL, leave until all growth is dead. Scrub the surface with bristle broom and water catching the fibres by filtering the down pipe run off. Allow to dry completely.
	All surfaces must be clean, dry and free from oil, grease, dirt and unsound paint, mould or other contamination. Treat with TRUEPREP SURFCE CLEAN following TDS instructions.
	Warning! If you scrape, sand, or remove old paint from any surface, you may release lead dust. Carefully clean up with a wet mop or HEPA vacuum. Prior to application it is important to determine if the existing asbestos matrix is well adhered to the substrate.
	Correct any surface defects and clean all surfaces thoroughly. Be careful not to agitate asbestos fibres during preparation; this could increase asbestos exposure. Stir thoroughly to achieve a uniform consistency.
MIXING INSTRUCTIONS	Stir thoroughly before use.
APPLICATION NOTES	Coverage depends on surface profile and porosity. Number of coats is dependent on the method of application.
	Applicator must achieve total 500 mµ wet film thickness.
THINNING	Thinning not recommended.
ENVIRONMENTAL	This formulation uses the latest technology with low toxicity, ensuring environmental issues are not compromised. DO NOT POUR paint or wash down storm water or water courses. ALWAYS dispose of in accordance with local Government regulations. Soak up spills with absorbent material and dispose of properly. If spraying use suitable respiratory protection. Refer to the MATERIAL SAFETY DATA SHEET
